

Research software at Oxford

A University of Oxford template

YOUR NAME · AUGUST 2026

Research software that supports Oxford's work

YOUR NAME · AUGUST 2026

What we do

Software is part of modern research

Research software engineering makes code a reliable research instrument.

- Build robust tools for researchers and research groups.
- Improve quality, reproducibility and long-term sustainability.
- Share expertise across disciplines and institutions.

Two complementary approaches

Embedded collaboration

Work directly with research teams to make software practical and sustainable.

Community capability

Share tools, standards and expertise across the University.

A clear delivery model

Discover

Understand research needs and define a practical technical approach.

Develop

Build, test and release software with researchers.

Sustain

Improve, maintain and share the resulting tools.

A practical partnership

Embedded expertise alongside research teams.

We help turn research ideas into maintainable software, then support teams as their needs grow.

Support across the software lifecycle

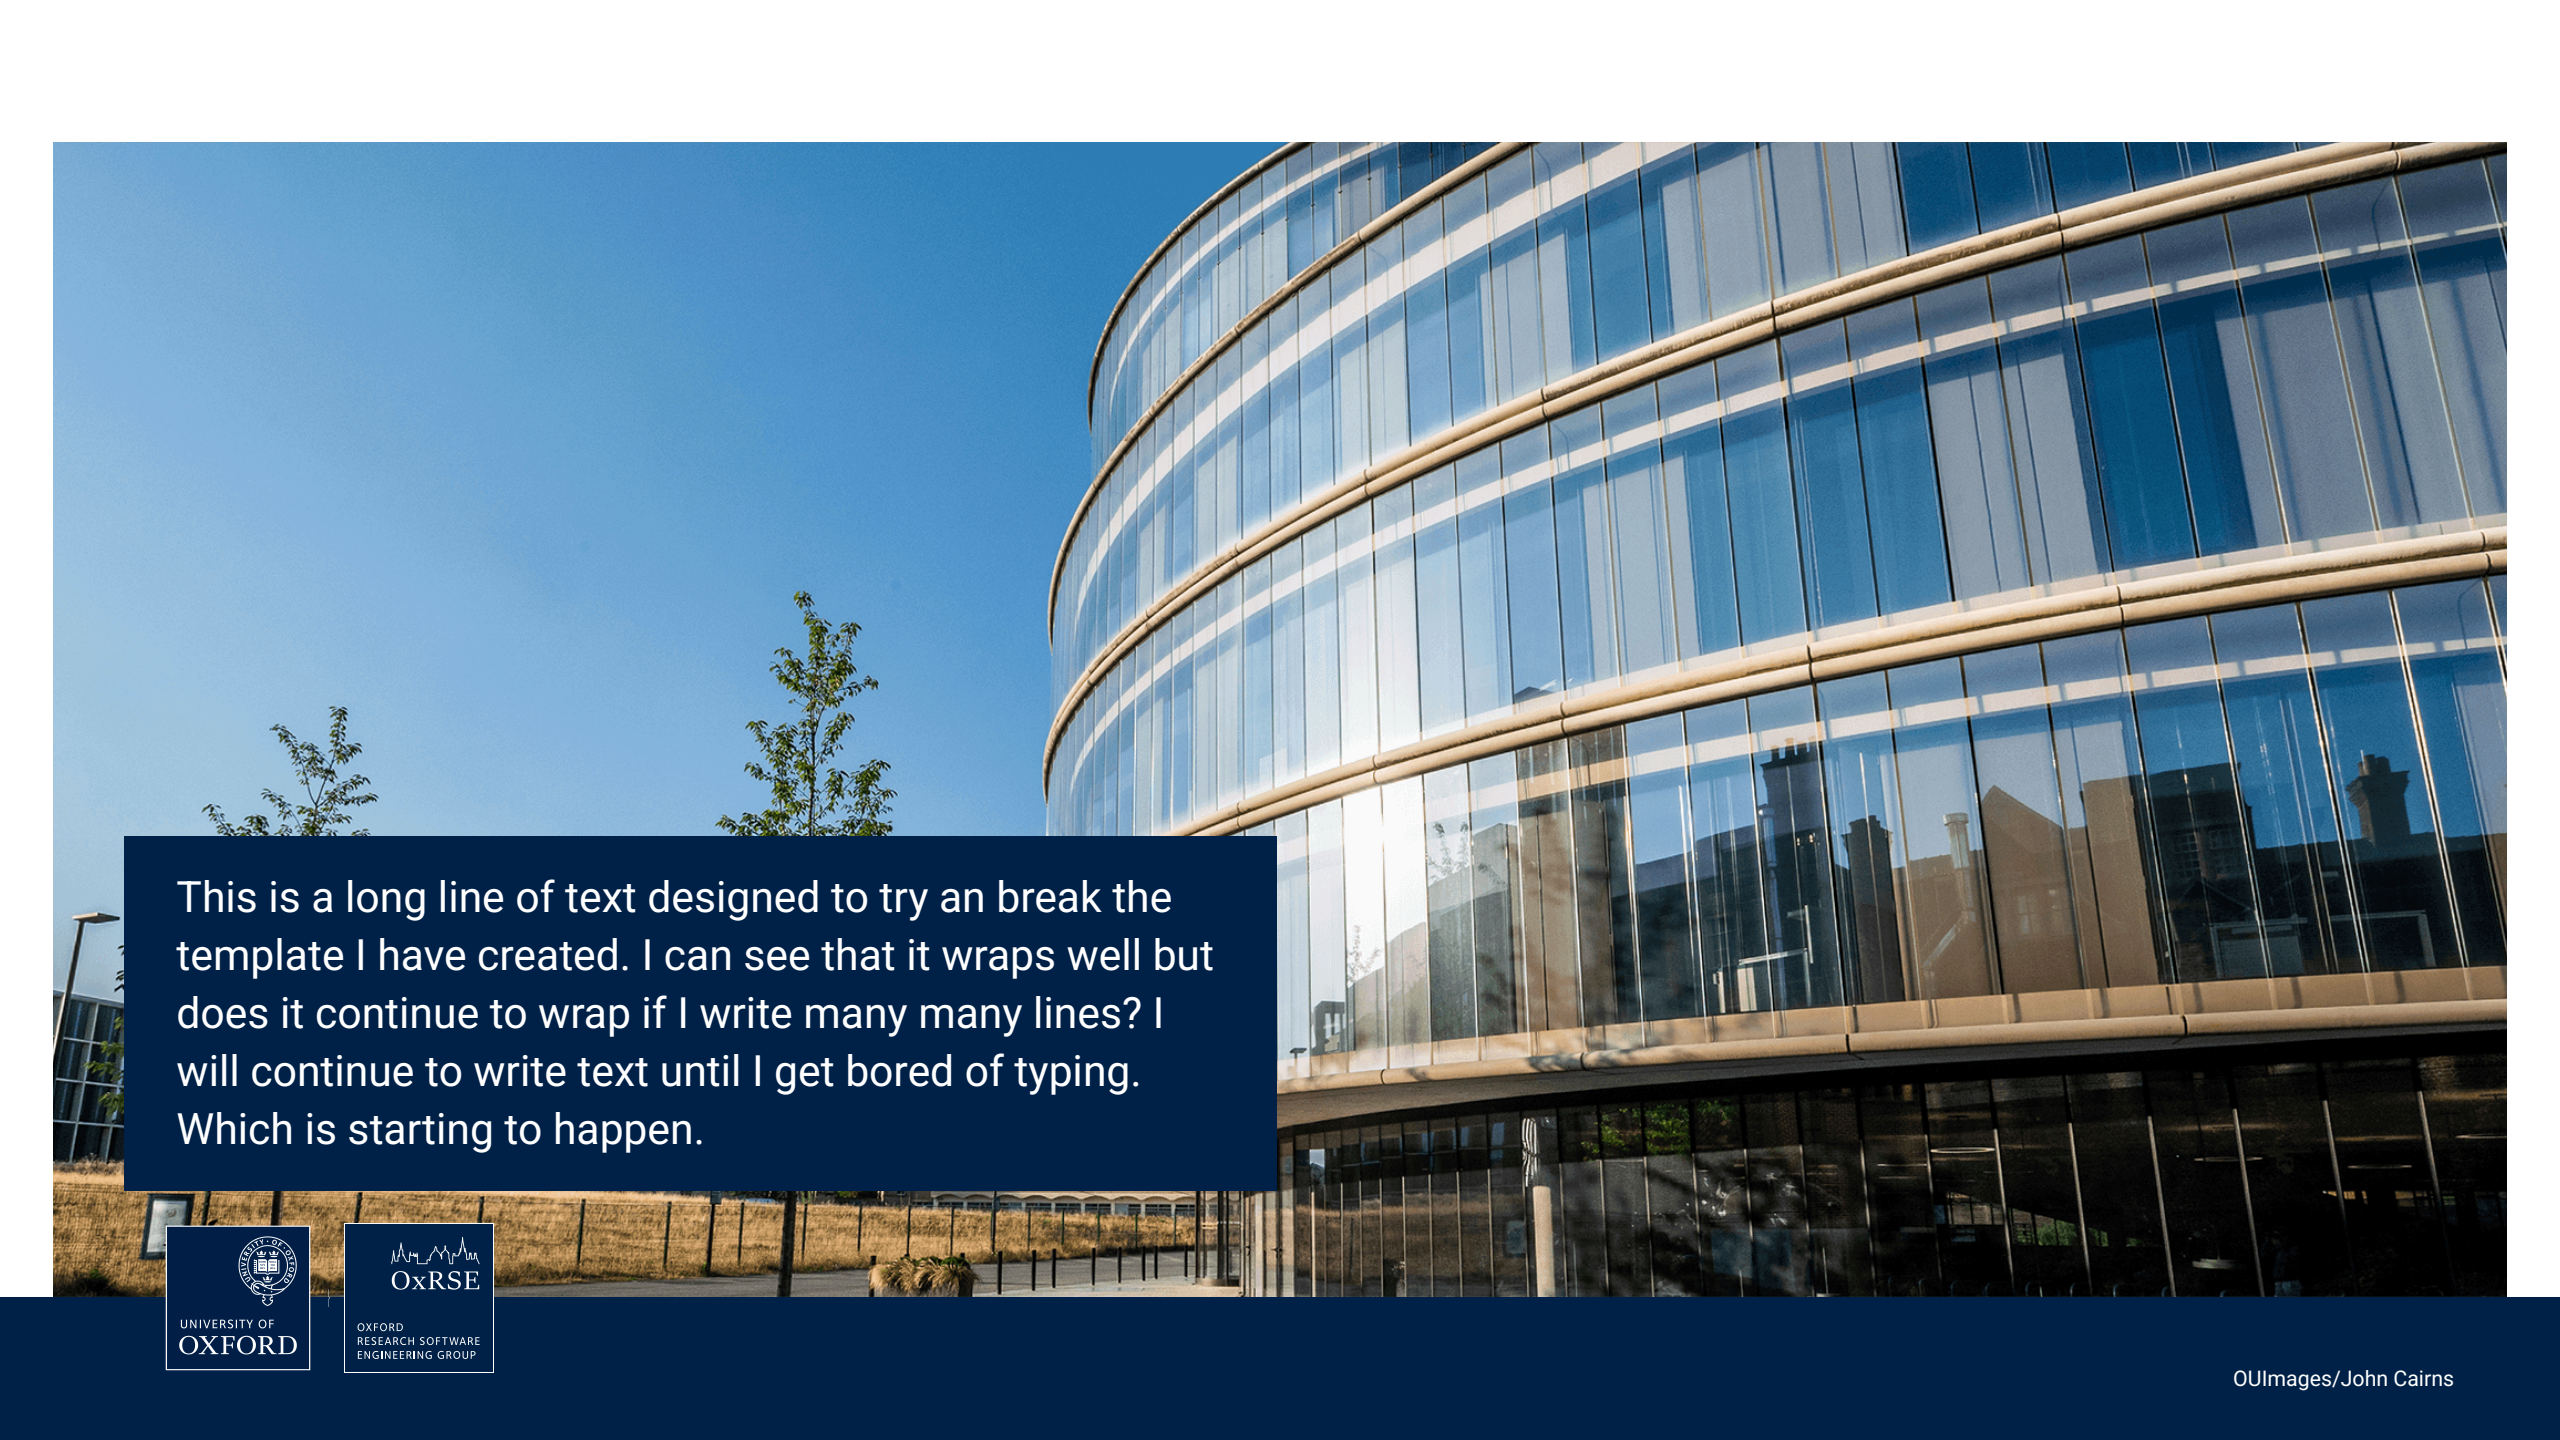

Plan and design

Define needs, choose approaches and make good technical decisions.

Build and sustain

Develop, test, release and maintain research software.

A photograph of a modern, curved glass building with a blue sky background. The building's glass facade reflects the sky and surrounding environment. A dark blue rectangular box is overlaid on the left side of the image, containing white text.

This is a long line of text designed to try and break the template I have created. I can see that it wraps well but does it continue to wrap if I write many many lines? I will continue to write text until I get bored of typing. Which is starting to happen.

A command-line workflow

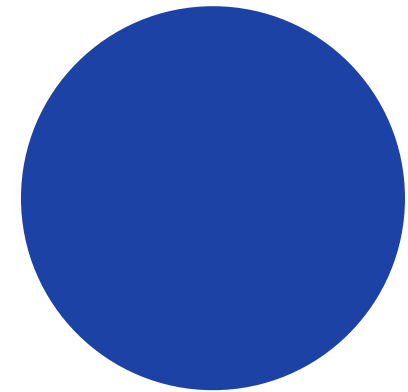

```
$ typst compile examples/dummy-presentation.typ output/presentation.pdf --root .
```

A connected service

One team, working with many research communities.

The group connects researchers, software practice and the wider University technology ecosystem.
